We get a lot of feedback from customers about SPOT shared pages and questions about how to share them with their friends, family or anyone else. Shared pages are great because you can share your SPOT locations with others, whether they have an account or not. But sometimes the code in the share address link is long and hard to remember. Here's an idea—head to <a href="tinyurl.com">tinyurl.com</a>.

This site allows you to enter a long URL and make a tiny one out of it: For free! Just head to tiny unl.com

and enter your share page address and what you want the custom tiny URL to be. For example, tinyurl.com/billyspot. (Not real! At least as far as we know.)

If you haven't used shared pages or are not sure how to access anything that you set up. Follow here:

- 1. Go to https://login.findmespot.com
- 2. Log in and then go to the share tab. (Visual)
