

# SPOT FAQs

## What is SPOT?

### TRACK ANYTHING. MESSAGE ANYWHERE. CALL ANYTIME.

SPOT products allow friends, family, coworkers and emergency responders to track your location and know you are okay during off-the-grid adventures, check-in and make calls from virtually anywhere beyond the boundaries of cellular, and provide theft-alert monitoring your most valuable asset using 100% satellite technology. Pretty cool, huh?

## Who needs SPOT?

Who doesn't. Anyone who likes to get outside for recreation or finds themselves off-the-grid to conduct business needs a SPOT to keep in touch. Many adventurers and workers don't even realize that at some point, their travels will take them outside the range of cell service. Whether you're a hiker, biker, boater, pilot, skier or just like to take the family camping once in a while, a SPOT device is a necessity to stay connected and possibly even help rescue you in the event of a life-threatening situation. Averaging almost two rescues a day, SPOT has initiated over 5,000 rescues worldwide.

Many government and emergency preparedness agencies, as well as workers in industries such as Aviation, Powersports, Forestry, Maritime and Oil and Gas, have solved their communication needs with SPOT.

When it comes to our **SPOT TRACE®**, ANYONE can use it. This must-have device ensures that your most valuable asset is where it needs to be at all times, notifying you via email or text when movement is detected anytime, anywhere.

## What are the primary benefits of SPOT?

- 100% Satellite Technology - SPOT delivers peace of mind by maintaining connectivity even beyond the range of cellular
- We Save Lives – SPOT products have been responsible for over 5,000 rescues worldwide
- Affordable – SPOT has the most economical pricing on the planet. It's a steal compared to other satellite solutions
- Easy to Use – SPOT users are relieved by the simplicity of our products

## How does SPOT work?

SPOT devices work with the Globalstar GPS Satellite Network to transmit your location and messages to your predefined contacts. S.O.S. information is transmitted directly to GEOS International Emergency Rescue Coordination Center via satellite.
